

# OpenStack Swift Reference Designs

This document contains four OpenStack Swift reference designs: small, medium, large, and compute and object cloud.

The four designs have separate high level specifications and architecture diagrams but all re-use a common set of bill of materials, racking rules, and network plug suggestions.

Small	Medium	Large
Integrated Proxy. 24 object server limit.	Dedicated proxy nodes.	Dedicated proxy and dedicated meta-data nodes.

# Guidelines for choosing between small and medium

## **Storage size:**

Small is limited to a maximum of 24 object servers. If you need more storage than can fit in 24 object servers you should choose medium.

## **Background:**

Swift small contains exactly 3 Swift proxies which run on the 3 controllers. There are no horizontal scaling guidelines going beyond 3 controllers. Given the horizontal scaling rule of thumb of 1 proxy server to 8 object servers you are limited to a maximum of 24 object servers.

## **Performance:**

Depending on your object storage workload characteristics you may find that the proxy servers become the bottleneck due to either the workload or the sharing of controller server resources between the control plane services and the Swift proxy service. Additionally, depending on the workload you may need more than 3 proxies to handle 24 object servers. If either of these issues becomes a factor, moving to Swift medium with its dedicated Swift proxy nodes would alleviate the issue.

# Guidelines for choosing between medium and large

## **Cost savings:**

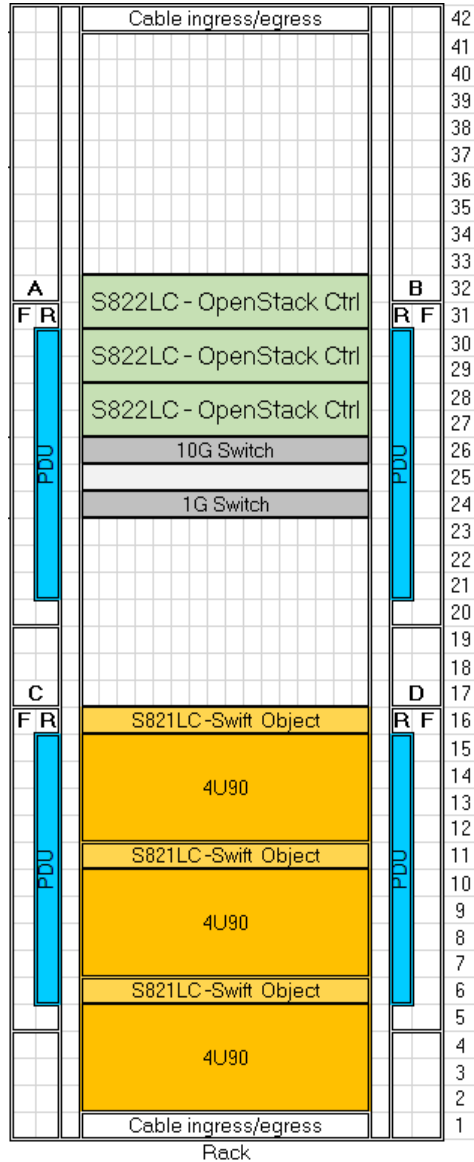

As you scale the medium architecture horizontally, given workload specifics you may begin to have under utilized SSDs which are used to hold the account and container Swift rings. At some point you hit a tipping point where it is more cost effective to host the account and container rings with their associated SSDs in dedicated metadata servers. You would then scale the metadata servers horizontally with a rule of thumb ratio of 1 metadata server to 6 object servers. The exact point you when you hit this cost savings threshold is dependent upon server and SSD pricing.

## **Performance:**

The object storage workload specifics could favor large with its dedicated metadata servers before the cost savings threshold is hit. For example, if the workload has an extremely high number of users and containers but lower raw object storage needs, and the workload is doing a lot of account and container lookup, the large configuration with its dedicated metadata servers may be a better fit.

Small Swift Cluster

# Swift Small – Base Config– High Level Specification Sheet

## OpenStack Software Stack:

Ubuntu 16.04 (all nodes)

Openstack Newton

OpsMgr + Horizon DashBoard

-Nagios Core

- ELK Stack (Elasticsearch, Logstash, Kibana)

\*\*Contact IBM for  
Redundant/Bonding Options

## Network : (non HA) – no Bonding \*\*

1 x Mellanox SX1410 (8831-S48)

1 x Lenovo G8052 (7120-48E)

## Rack:

**QTY: 1**

SlimRack 7965-94Y (Standard 19" rack)

PDUs x 4: Each node should have 2 power cords cabled to two different PDUs

## OpenStack Controller & Proxy:

**QTY: 3**

Server Config: (Briggs 8001-22C) (2U)

20 Cores ( 2.92 Ghz), 128 GB,

2 x 4TB SATA HDDs

1 x 2-Port 10G NIC ( Intel 10G/Mellanox)

## Swift Object /MetaData

**QTY: 3**

**Per Server Config:** (Stratton 8001-12C) (1U)

16 Cores ( 2.3Ghz), 256GB

- (OS) 2x 128GB DOM + 4 x 240 GB SSDs
- 1 x 2-Port 10G NIC ( Intel/Mellanox)
- 1 x LSI 3008 External SAS (8 port SAS3)

**Expansion Drawer (4U) :**

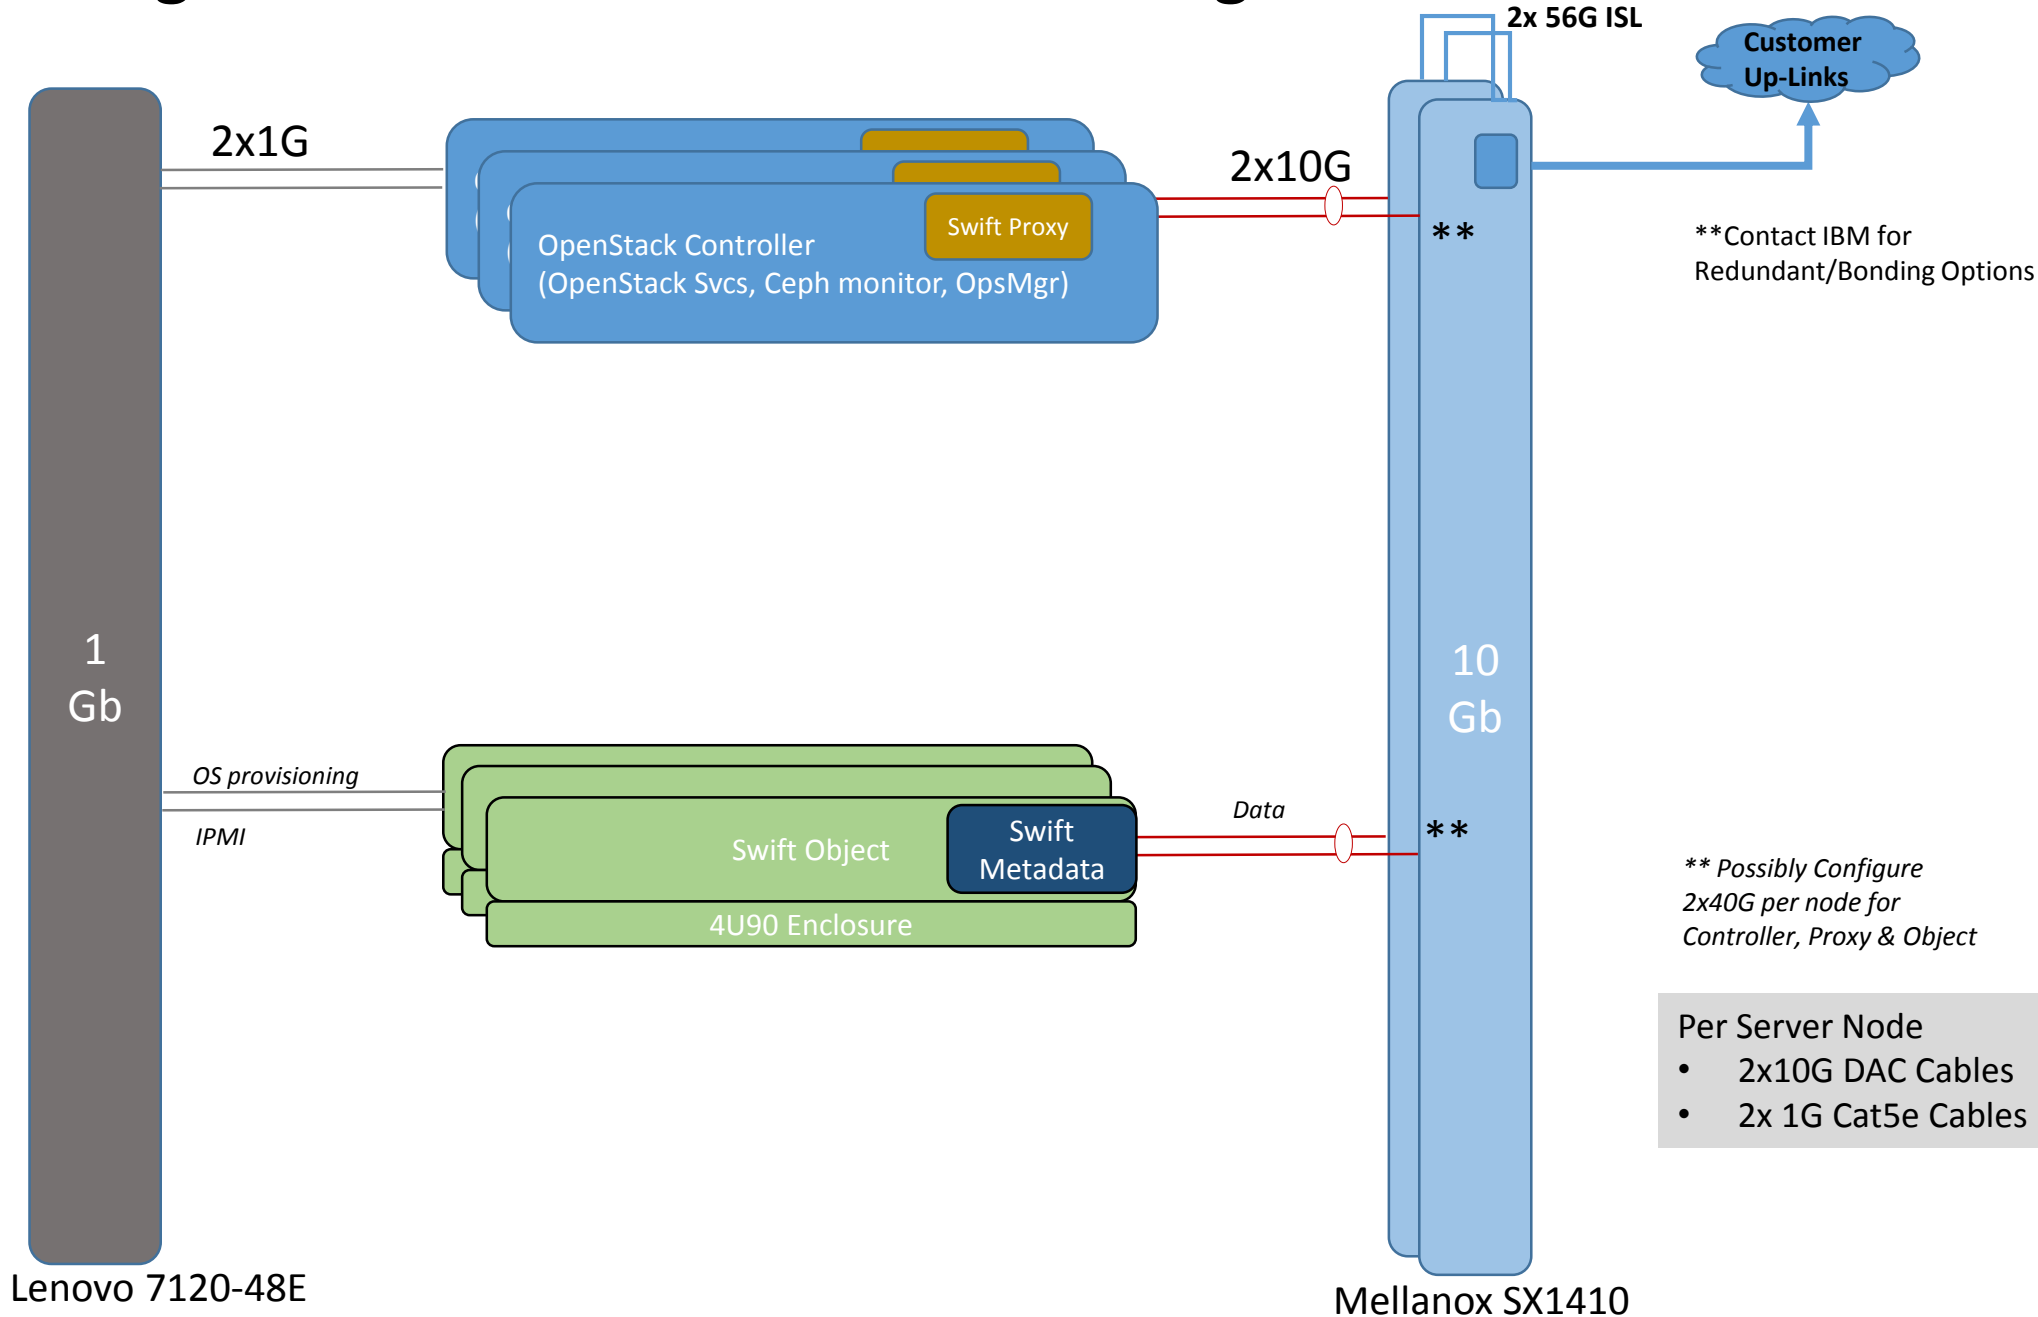

90 LFF JBOD Storage SMC PN SE-946ED-R2KJBOD

90 LFF – 2TB SAS HDDs

## \*\*Notes:

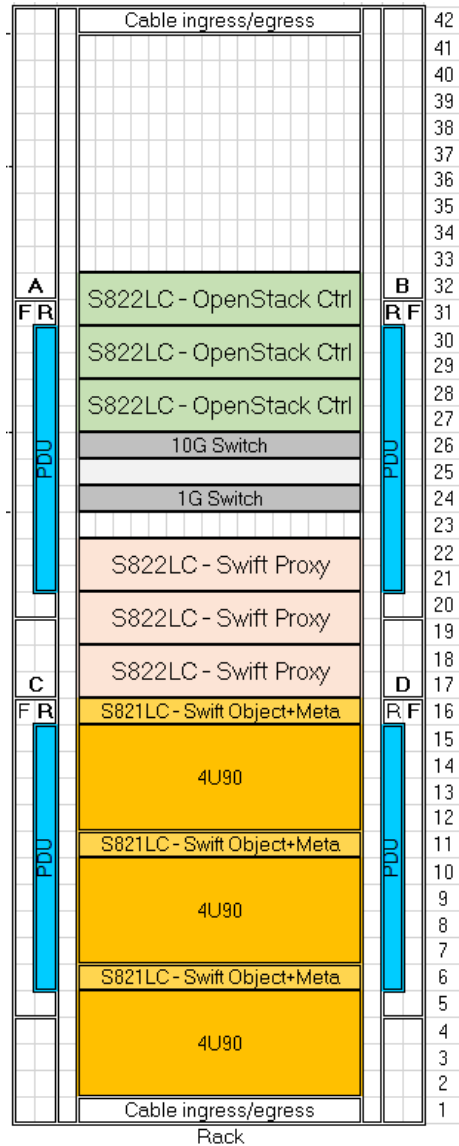

a) Proc + Memory config may need to be altered based on actual performance requirements

# Swift Small - High Level Network Architecture Diagram

Medium Swift Cluster

## \*\*Notes:

a) Proc + Memory config may need to be altered based on actual performance requirements

## OpenStack Software Stack:

Ubuntu 16.04 (all nodes)

Openstack Newton

OpsMgr + Horizon DashBoard

-Nagios Core

- ELK Stack (Elasticsearch, Logstash, Kibana)

\*\*Contact IBM for  
Redundant/Bonding Options

## Network : (non HA) – no Bonding \*\*

1 x Mellanox SX1410 (8831-S48)

1 x Lenovo G8052 (7120-48E)

## Rack:

**QTY: 1**

SlimRack 7965-94Y (Standard 19" rack)

PDU's x 4: Each node should have 2 power cords cabled to two different PDU's

## Swift MetaData

**QTY: 3**

**Per Server Config:** (Stratton 8001-12C) (1U)

16 Cores ( 2.3Ghz), 256GB

- (OS) 2+ 128GB DOM + 4 x 240GB SSDs
- 1 x 2-Port 10G NIC ( Intel/Mellanox)

## Swift Object

**QTY: 3**

**Per Server Config:** (Stratton 8001-12C) (1U)

16 Cores ( 2.3Ghz), 256GB

- (OS) 2x 128GB DOM
- 1 x 2-Port 10G NIC ( Intel/Mellanox)
- 1 x LSI 3008 External SAS (8 port SAS3)

## Expansion Drawer (4U) :

90 LFF JBOD Storage SMC PN SE-946ED-R2KJBOD

90 LFF – 2TB SAS HDDs

## OpenStack Controller:

**QTY: 3**

Server Config: (Briggs 8001-22C) (2U)

20 Cores ( 2.92 Ghz), 128 GB,

2 x 4TB SATA HDDs

1 x 2-Port 10G NIC ( Intel 10G/Mellanox)

## Swift Proxy:

**QTY: 3**

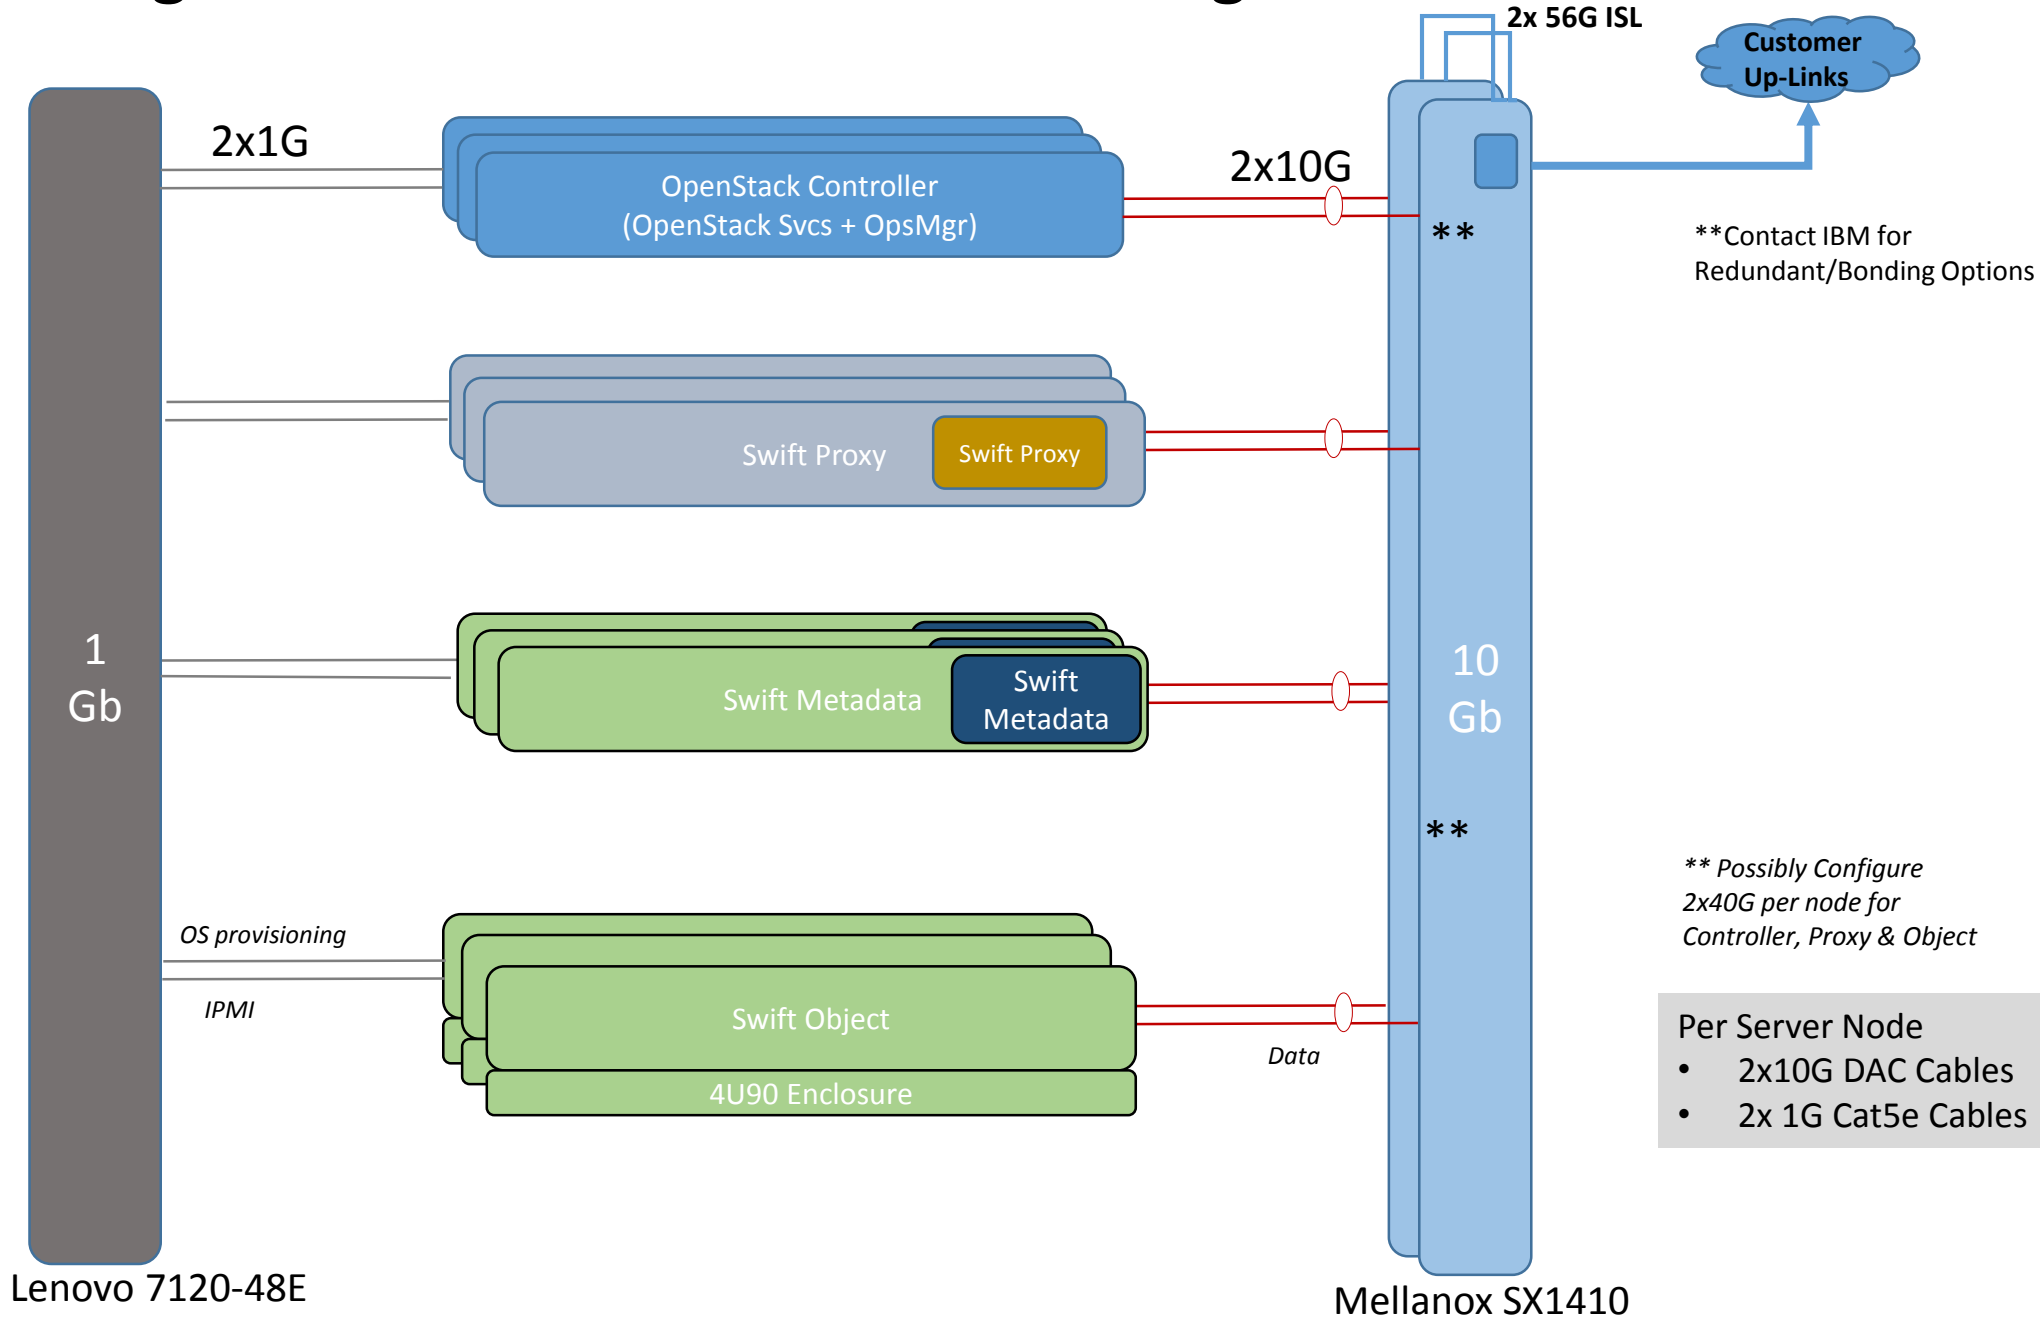

**Per Server Config:** (Briggs 8001-22C) (2U)

20 Cores (2.92Ghz), 256GB

2 x 2 TB SATA HDDs

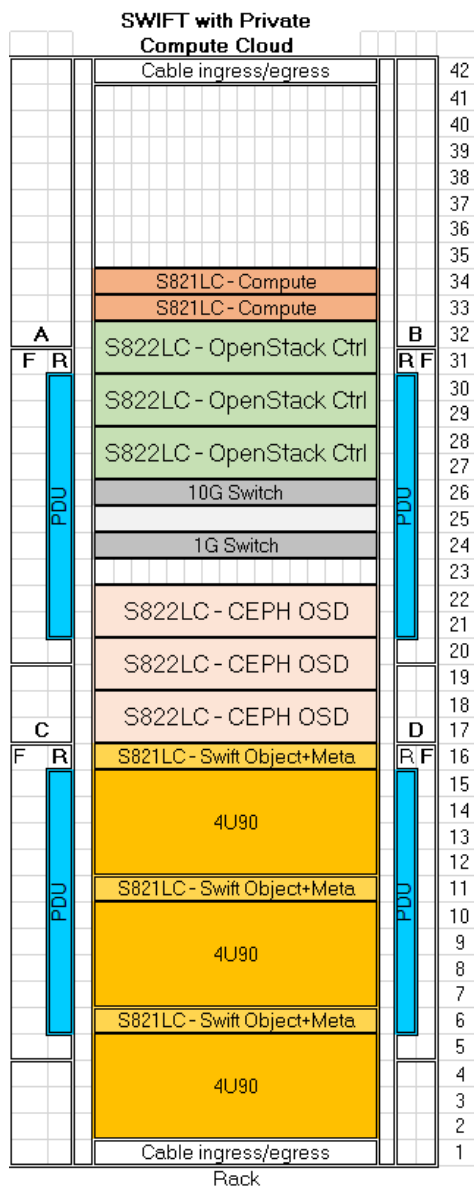

1 x 2-Port 10G NIC ( Intel 10G/Mellanox)

# Swift Large - High Level Network Architecture Diagram

# Private Cloud with Object Storage and Compute

# Swift with Private Compute Cloud – Base Config– High Level Specification Sheet

## \*\*Notes:

- Openstack & Proxy Node can be combined for fewer than 24 SWIFT Objects
- Compute qty + Memory may need to be altered based on actual performance requirement
- Dedicated Swift Proxy Server maybe required

## OpenStack Software Stack:

Ubuntu 16.04 (all nodes)

Openstack Newton

OpsMgr + Horizon DashBoard

-Nagios Core

- ELK Stack (Elasticsearch, Logstash, Kibana)

## OpenStack Controller:

**QTY: 3**

Server Config: (Briggs 8001-22C) (2U)  
20 Cores (2.92 Ghz), 128 GB,  
2 x 4TB SATA HDDs  
1 x 2-Port 10G NIC ( Intel 10G/Mellanox)

## OpenStack Compute:

**QTY: 2**

Server Config: (Stratton 8001-12C) (1U)  
16 Cores ( 2.3Ghz), 128GB ,  
2 x 4TB SATA HDDs  
1 x 2-Port 10G NIC ( Intel 10G/Mellanox)

## CEPH Config :

**QTY: 3**

**Per Server Config:** (Briggs 8001-22C) (2U)  
16 Cores (3.32Ghz), 128GB  

- (OS) 2x 128GB DOM + (Journal) 2x 240GB SSDs (1.2 DWPD) + (Storage) 10 x 8TB SAS HDDs (~80TB)
- 1 x 2-Port 10G NIC ( Intel/Mellanox)

**\*\*Contact IBM for  
Redundant/Bonding Options**

## Network : (non HA) – no Bonding \*\*

1 x Mellanox SX1410 (8831-S48)

1 x Lenovo G8052 (7120-48E)

## Rack:

**QTY: 1**

SlimRack 7965-94Y (Standard 19" rack)

PDU's x 4: Each node should have 2 power cords cabled to two different PDU's

## Swift Object / Metadata

**QTY: 3**

**Per Server Config:** (Stratton 8001-12C) (1U)

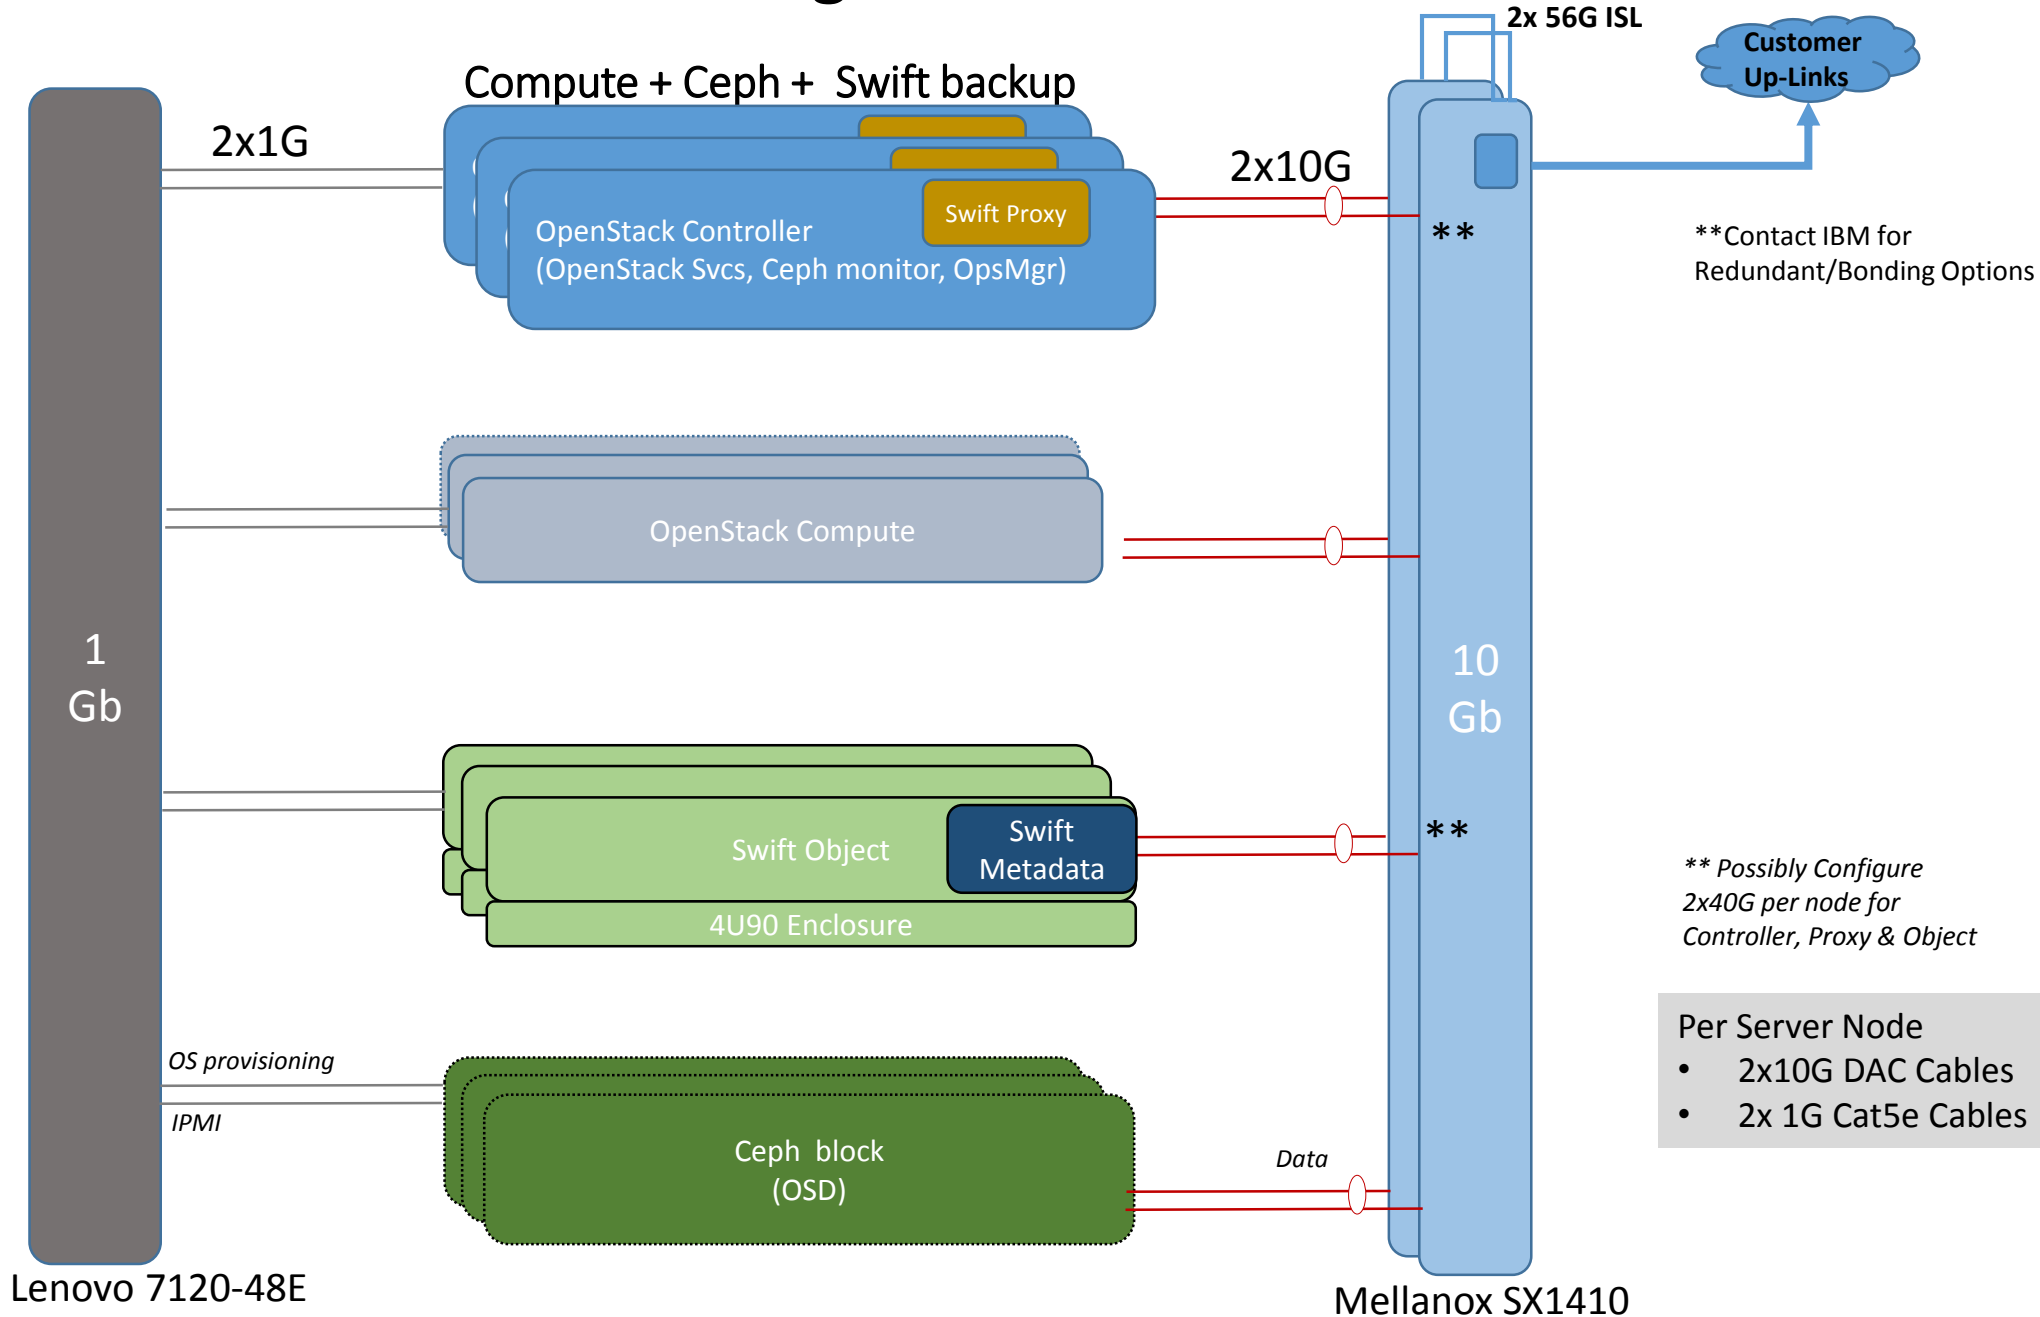

16 Cores ( 2.3Ghz), 256GB

- (OS) 2x 128GB DOM + 4 x 240GB SSDs
- 1 x 2-Port 10G NIC ( Intel/Mellanox)
- 1 x LSI 3008 External SAS (8 port SAS3)

## Expansion Drawer (4U) :

90 LFF JBOD Storage SMC PN SE-946ED-R2KJBOD  
90 LFF – 2TB SAS HDDs
